

Discovery and **unlock** new ways of **thinking** about information, concepts, and systems—including broader, global contexts.

Make learners the star of the online learning community, not the technology. Keep classroom conversations focused on learning, not drama.

Recognize and **reinforce** learning and discovery. Highlight the progress learners have made in mastering the content you have created for them.

Promoting Engagement in Virtual Classrooms

Create an environment that enthusiastically supports and generates sharing of options, questions, and observations. Make it okay to be wrong.

Infuse passion into your learning space by sharing stories, sparking questions, and featuring humanism in medicine. Give more of **yourself**.

With social distancing in play, finding ways to connect learners is critical. Monitor the psycho-social well-being of the learning community and mitigate feelings of anonymity.
